

# 5 THINGS YOU NEED TO KNOW ABOUT MDM

There are many MDM solutions out there, but selecting the right solution for your enterprise may seem challenging – especially if you’re not aware of what to look out for. This checklist covers the top 5 MDM capabilities that our clients ask for.

## SIMPLIFIED, CONSISTENT PROVISIONING

Between enterprise sign in, application installations, passcode setup, and more, MDMs can streamline deployment to automate initial device configuration for your end user.

1

## ENSURING POLICY COMPLIANCE

MDMs can ensure that your devices are running the latest operating systems, lock out phones that have been modified with “root” privileges, enforce a complicated front screen passcode and more.

2

## PROVIDING CONSOLIDATED AND ACCURATE DEVICE INVENTORY

MDMs should be able to provide insight into the total number of devices you own, along with the make, model, and software installed on each device.

3

## SUPPORTING REMOTE WIPING FOR LOST OR STOLEN DEVICES

MDMs have a variety of device-level commands that can help your help desk manage and wipe your mobile devices remotely.

4

## FACILITATING REMOTE VIEW/CONTROL

Remote view/control is a great differentiator between MDMs. Some will support it natively, while others opt to build out integrations with third-party Remote Desktop Support products.
